

Bethel Collins-Okocha Backend Developer Lagos , Nigeria +2348133891619 bethelcollins100@gmail.com			
Profiles	devkol-11		Bethel Collins
Summary	Skilled Software Developer specializing in complex backend architecture and application engineering. Proven track record in building and optimizing high-volume API services and sophisticated communication platforms. Expertise includes utilizing advanced cloud computing services to deliver reliable, high-availability solutions.		
Experience	FreeLancer Backend-Developer Developed tailored, secure, and performant backend APIs, translating complex client requirements into reliable, production-ready server applications. Successfully executed a deep technical audit and subsequent refactoring, boosting the API's overall efficiency and paving the way for future feature integration.		2023 - 2024
	InternPulse Backend-Developer Engineered robust and scalable backend services, utilizing advanced design principles to ensure high performance and reliability under increasing user load. Held primary ownership for key feature delivery, playing a central role in architectural discussions and direct contribution to the main product codebase. Championed quality assurance initiatives, significantly improving system reliability and code robustness through rigorous unit, integration, and end-to-end testing frameworks.		June 2025-September 2025 Lagos , Nigeria
Projects	Gig-Link https://github.com/Devkol-11/GIG-LINK Gig-Link facilitates confident collaboration among creators and freelancers by offering a structured platform for posting, applying, communicating, and handling transparent financial workflows (billing/payments). Built using TypeScript, Express, PostgreSQL, and Prisma, the server-side architecture employs Hexagonal Principles within a modular monolith structure. This design choice was guided by the principles of Domain-Driven Design (DDD), allowing us to ensure robust maintainability and scalability by logically separating distinct business capabilities across complex features like authentication and payments.		
	Web-Crawling-Engine https://github.com/Devkol-11/Web-Crawling-Engine This project features a high-fidelity monolithic web crawler designed for comprehensive data acquisition. The system prioritizes robustness and performance, leveraging a dedicated Redis URL Frontier for efficient queue management and utilizing MongoDB to establish a persistent, flexible schema for collected data. The implementation focuses on professional-grade TypeScript/Express development and system-level performance optimization.		
	Click-D-Link https://github.com/Devkol-11/Secure-Link-Manager Developed a highly secure and robust link-management platform, enabling users to generate and manage a single, verified link for distribution. The system features a modular NestJS backend implemented with Hexagonal Architecture, which guarantees clean separation of concerns and facilitates robust unit and integration testing. Core functions include user authentication, link verification, and secure, validated redirection logic.		
Skills	Javascipt		Typescript
	Express.js		Fastify
	Docker		AI Sdk's
	Node.js		
	Nest.js		
	Aws cloud services
